

## Datasheet: Golden State

From a seed no bigger than one of a tomato, California's Redwood trees grow to become some of the tallest trees in the world. Primarily grown in Northern California, this region's iconic fog and sea breeze allow Redwoods to live up to 2000 years.

Despite its previous exterior use, our Golden State Redwood's high tannin content makes it uniquely disease-free and durable. These combined qualities make Redwood naturally indestructible.

Our Reclaimed Wood is **heat treated** and **metal free!**

**Source:** Fencing from Northern California

**Prior Use:** Fencing

**Species:** Redwood (*Sequoia Sempervirens*)

**Character:** Rustic weathered exterior, mostly brown color variation, knots, checking, nail and bug holes

**Material #:** GS-RW
