

Datasheet: Water Tank

Water tanks have long provided people with water for drinking, irrigation, fire safety, and more. Once peppering the American landscape, water tanks were spread out about every ten miles alongside rail lines to give steam-powered trains the water they needed.

Throughout history, water tanks were wooden, stone, or ceramic as these materials were known to stand the test of time. However, wooden water tanks are now becoming more of a relic as they are being dismantled and replaced with newer materials like carbon steel, fiberglass, and concrete. Fortunately, this change is making Water Tank Redwood available to be repurposed into new projects.

Our Reclaimed Wood is **heat treated** and **metal free!**

Prior Use: Water tanks

Source: Water Tanks Across California

Certified: FSC Recycled 100%

Species: California Redwood (*Sequoia Sempervirens*)

Character: Deep brown patina, nail holes, some dark cracks

Material#: WT-RW

(408) 778-2036
