The Story: Golden State Redwood

From a seed no bigger than one of a tomato, California's Redwood trees are some of the tallest trees in the world. In North America, Redwood trees have been rooted in Northern California for thousands of years. The region's iconic fog and sea breeze are the ideal climate to enable these Redwood giants to live for over 2000 years.

Despite its previous exterior use, Mission Bell's Golden State Redwood is in very good condition. How these boards have been so well-maintained is largely due to the durability of Redwood itself. The wood's high tannin content keeps it disease-free to make Redwood naturally indestructible. This only leaves one question: Why not integrate this enduring material into your next project?

Material #: GS-RW Golden State Redwood (*Sequoia Sempervirens*)
